

1. mail from: command of SMTP protocol  
~~used from:~~ a part of message body

2. SMTP: using a " "

HTTP

1. mail from: an important identifier indicating the receiver's mail server in SMTP

from: just a part of mail message body

2. SMTP: a line containing only a " " -

HTTP: use content-length in the header field.

No. HTTP stores data in the binary form, while SMTP uses ASCII (human-readable) to save data. Thus they cannot use same method

3. We can select ~~an~~ a period randomly. Then for the period, we can collect the frequency of ~~users~~ <sup>web</sup> servers among users. For those servers with higher frequency, they are more popular among users.

4.  ~~$F = 15 \text{Gb}$ ,  $U_s = 30 \text{Mb/s}$ ,  $D_i = 2 \text{Mb/s}$~~   
 ~~$N = 10, 100$~~

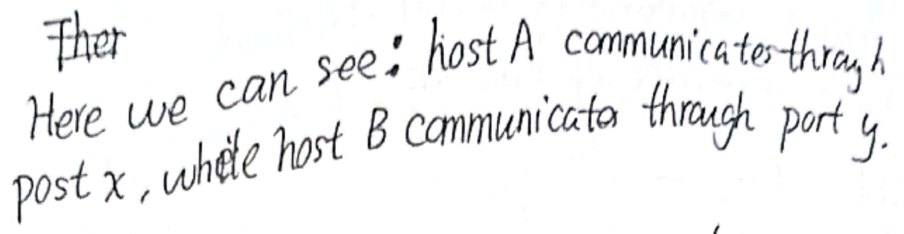

5. a. in this case, we need to store  $N * N = N^2$  files.

b. in the synchronized case, there are  $N + N = 2N$  files to store.

6. a. This is trying to make a TCP connection with a server which is not existing. Thus the connection ~~is~~ cannot be built.

b. UDP does not require connection. Thus the UDPClient can execute and input a sentence.

c. ~~Error will occur~~ This will cause Exception. Since their port number does not match, the client will find a wrong process.

8. Here are several reasons:

② Some applications do not need reliable data transmission.

(a) 
$$\begin{array}{r} 01010011 \\ 01100110 \\ + 01110100 \\ \hline 10010111 \end{array}$$

↓  
overflow, omitted

(b) This is to detect the transmission error.  
If only use the sum, then some error cases cannot be detected.  
e.g. 01010011, 01100110, 01110100  
transmission error

Thus the data is incorrect due to

c) Sum should not contain 0. Thus for those bits with 0 in the sum there are no errors

d) 1-bit error can be detected

(e) 2-bit error may not be detected

4.  $F = 15G$ , to  $N$  peers.

$U_s = 30 \text{ Mb/s}$ ,  $D_i = 2 \text{ Mb/s}$

C1) For the client-server model.

$$D_{cs} \geq \max \left\{ \frac{NF}{U_s}, \frac{F}{d_{\min}} \right\}$$

$$\frac{F}{d_{\min}} = \frac{15 \times 1024 \text{ M}}{2 \text{ M}} = 7680 \text{ s}$$

~~④  $N=10, U=$~~

①  $N=10, U=300 \text{ Kb/s}$

$$\frac{NF}{U_s} = \frac{10 \times 15 \times 1024 \text{ M}}{\frac{300 \text{ Kb/s}}{1000}} = 51200 \text{ s}, D_{cs} = 7680$$

②  $N=100, U=300 \text{ Kb/s}$

$$\frac{NF}{U_s} = 51200 \text{ s}, D_{cs} = 51200 \text{ s}$$

③  $N=1000, U=300 \text{ Kb/s}$

$$D_{cs} = 512000 \text{ s}$$

Since  $D_{cs}$  is not relevant to  $U$ , the chart is given

$N \backslash U$	10	100	1000
300K	7680	51200	512000
700K	7680	51200	512000
2M	7680	51200	512000

C2) For the P2P model

$$D_{cs} \geq \max \left\{ \frac{F}{U_s}, \frac{F}{d_{\min}}, \frac{NF}{U_s + \sum_{i=1}^n U_i} \right\}$$

①  $U=300 \text{ K}$

$$\frac{F}{U_s} = \frac{15 \times 1024 \text{ M}}{30 \text{ M}} = 512 \text{ s}$$

$$\frac{F}{d_{\min}} = \frac{15 \times 1024 \text{ M}}{2 \text{ M}} = 7680 \text{ s}$$

$$\mu_i = 300 \text{ K/s}$$

for  $N=10$ ,  $\frac{NF}{\mu_s + N \times \mu_i} = \frac{10 \times 15 \times 10^{24} \text{ M}}{30 \text{ M} + 10 \times 300 \text{ K}} = 4654 \text{ s}$ ,  $D_{p2p} = 7680 \text{ s}$

for  $N=100$ ,  $\frac{NF}{\mu_s + N \times \mu_i} = \frac{100 \times 15 \times 10^{24} \text{ M}}{30 \text{ M} + 100 \times 300 \text{ K}} = 25903 \text{ s}$ ,  $D_{p2p} = 25903 \text{ s}$

for  $N=1000$ ,  $\frac{NF}{\mu_s + N \times \mu_i} = \frac{1000 \times 15 \times 10^{24} \text{ M}}{30 \text{ M} + 1000 \times 300 \text{ K}} = 47559 \text{ s}$ ,  $D_{p2p} = 47559 \text{ s}$

②  $\mu_i = 700 \text{ K/s}$

for  $N=10$ ,  $\frac{NF}{\mu_s + N \times \mu_i} = \frac{10 \times 15 \times 10^{24} \text{ M}}{30 \text{ M} + 10 \times 700 \text{ K}} = 4169 \text{ s}$ ,  $D_{p2p} = 7680 \text{ s}$

for  $N=100$ ,  $\frac{NF}{\mu_s + N \times \mu_i} = \frac{100 \times 15 \times 10^{24} \text{ M}}{30 \text{ M} + 100 \times 700 \text{ K}} = 15616 \text{ s}$ ,  $D_{p2p} = 15616 \text{ s}$

for  $N=1000$ ,  $\frac{NF}{\mu_s + N \times \mu_i} = \frac{1000 \times 15 \times 10^{24} \text{ M}}{30 \text{ M} + 1000 \times 700 \text{ K}} = 21525 \text{ s}$ ,  $D_{p2p} = 21525 \text{ s}$

③  $\mu_i = 2 \text{ M/s}$

for  $N=10$ ,  $\frac{NF}{\mu_s + N \times \mu_i} = \frac{10 \times 15 \times 10^{24} \text{ M}}{30 \text{ M} + 10 \times 2 \text{ M}} = 3072 \text{ s}$ ,  $D_{p2p} = 7680 \text{ s}$

for  $N=100$ ,  $\frac{NF}{\mu_s + N \times \mu_i} = \frac{100 \times 15 \times 10^{24} \text{ M}}{30 \text{ M} + 100 \times 2 \text{ M}} = 6678 \text{ s}$ ,  $D_{p2p} = 7680 \text{ s}$

for  $N=1000$ ,  $\frac{NF}{\mu_s + N \times \mu_i} = \frac{1000 \times 15 \times 10^{24} \text{ M}}{30 \text{ M} + 1000 \times 2 \text{ M}} = 7567 \text{ s}$ ,  $D_{p2p} = 7680 \text{ s}$

$\mu \backslash N$	10	100	1000
300 K/s	7680	25903	47559
700 K/s	7680	15616	21525
2 M/s	7680	7680	7680
